# PayFlex VTM

The Payflex is a Value Transfer Machine That Can Add Value to SmartCards and Dispense SmartCards without Cash. It Can Accept Credit Cards, Debit Cards and a Generated Code.

PayFlex is the next logical progression in the Coded Value Adder series of VTM's. Like the other CVA's, it will add value to a SmartCard through the use of a generated code. The customer visits a web site, or calls a phone number where they will use their credit card to authorize a value transfer. They will receive a numeric code which they can use to put value on their card by inserting their SmartCard into the Payflex, entering the code on the Payflex keypad, and the authorized value is added to their SmartCard. The customer can request a separate code to purchase a SmartCard, but many operators will load additional value on the card so the customer can receive a working card with a single code.

The added benifit to the PayFlex VTM is the ability to accept credit and debit cards at the unit. A mag stripe card swipe is mounted on the face of the Payflex, permitting the customer to add value or purchase a SmartCard with the swipe of a credit or debit card. To process credit/debit cards, the PayFlex must be connected to the Internet. The same, user friendly, bi-lingual (English and Spanish) interface that directs customers through simple operational steps on the other CVA VTM's, is also present on the PayFlex.

Front Access Only —11-100-360
